

KILLE NARESH

Kurnool, Andhra Pradesh, India 9392406858

- [Portfolio](#) - nareshkille97@gmail.com - [LinkedIn](#) - [GitHub](#) - [LeetCode](#)

PROFESSIONAL SUMMARY

Computer Science graduate with a strong foundation in Python, Machine Learning, and AI integration. Hands-on experience with TensorFlow, Keras, and scikit-learn through projects in deep learning and computer vision. Skilled in Python, Flask, MySQL, and Git, with strong problem-solving, communication, and teamwork abilities. Eager to contribute to innovative AI and Machine Learning solutions.

TECHNICAL SKILLS

Languages: Python, Java

Web Technologies: HTML, CSS, React.js, Node.js

Machine Learning: TensorFlow, Keras, Scikit-learn, OpenCV, NumPy, Pandas

Cloud Platforms: Google Cloud Platform

Databases: MySQL

Dev Tools: Git, GitHub, Visual Studio Code, PyCharm

WORK EXPERIENCE

Python Full Stack Trainee

Hyderabad

Codegnan IT Solutions

May 2026 – Present

- Gaining hands-on experience in Python Full Stack Development using Python, Django, Flask, HTML, CSS, JavaScript, React.js, and MySQL.
- Developing and deploying full-stack web applications by integrating responsive front-end interfaces with secure back-end services and databases.
- Building RESTful APIs and implementing CRUD operations while following clean coding standards and software development best practices.
- Collaborated in developing AI-driven financial analysis solutions using cloud-based infrastructure.

Google Cloud Generative AI

Hyderabad

Smartbridgonal Services Pvt Ltd

Dec 2025 – Mar 2026

- Designed and developed RESTful APIs using Python to process and analyze financial datasets.
- Implemented backend logic for data validation, transformation, and AI model integration.
- Built scalable backend architecture to ensure efficient data flow and optimized system performance.
- Collaborated in developing AI-driven financial analysis solutions using cloud-based infrastructure.

EDUCATION

Annamacharya Institute of Technology and Sciences

Bachelor of Computer Science and Engineering

Sep 2022 – May 2026

PROJECTS

- **Identification of Malicious Clients in Federated Learning with Secure Aggregation** – Developed a secure Federated Learning system to identify malicious clients while preserving data privacy through secure aggregation. Built a web-based application using Python and Flask, applied machine learning techniques for data analysis and model evaluation using Pandas, NumPy, and Scikit-learn, and visualized performance metrics with Matplotlib. Managed the project using Git and GitHub while focusing on secure, reliable, and privacy-preserving distributed model training. [Github](#)
- **Pattern Sense – Fabric Pattern Classification Using Deep Learning** – Developed a CNN-based image classification system using Python, TensorFlow, and Keras to identify multiple fabric pattern categories. Implemented image preprocessing, data augmentation, model training, and performance evaluation to improve classification accuracy. Leveraged OpenCV for image processing and built an end-to-end deep learning pipeline, demonstrating practical skills in computer vision, machine learning, and AI-driven image recognition.
